BAYLOR MEDICAL CENTER AT GARLAND ANNOUNCES THE ARRIVAL OF
da Vinci® Si™ SURGICAL SYSTEM

GARLAND, TEXAS (July 23, 2012) -- Baylor Medical Center at Garland is pleased to introduce the da Vinci® Si™ Surgical System to our operating room and to our community. This is a significant arrival because of the value it offers our surgical staff and those in the region we serve.

The da Vinci® Si™ has several unique features designed to provide additional clinical benefits and efficiency in the operating room, many of which translate to patient benefits. Here are a few features of the da Vinci® Si™:

- Enhanced 3D, high-definition vision of operative field with up to 10x magnification
- New optional dual console allows second surgeon to provide assistance
- Superior visual clarity of tissue and anatomy
- Surgical dexterity and precision greater than the human hand
- Updated and simplified user interface to enhance OR efficiency
- New ergonomic settings for greater surgeon comfort

Together, these technological advancements provide the surgeons on our medical staff with better precision, dexterity and control that enable a minimally invasive approach for many complex surgical procedures.

“We believe that the new features of the da Vinci Si System will help us provide quality outcomes and is proof of our commitment to provide our community access to advanced minimally invasive surgery,” says Tom Trenary, president at Baylor Medical Center at Garland.

da Vinci’s advanced level of technology takes surgery beyond the limits of the human hand. This acquisition complements our goal of extending minimally invasive surgery to a broader base of patients. It can be used for a multitude of procedures, including, but not limited to: prostatectomy, hysterectomy, myomectomy, coronary artery bypass, mitral valve repair and colorectal surgery. “Baylor Medical Center at Garland is focused on taking care of our guests and their path to healing, both of which continue to be the driving force behind
implementing advanced technology like robotics,” says Steven Arze, M.D., chief medical officer and vice president of medical affairs at Baylor Medical Center at Garland.
